

Conversion Issues Database Revision History

Version 1.0.0 3/30/04

(this version was included with MetadataMagic 2.0.0)

Initial public release.

Version 1.0.1 4/5/04

(this is the version which was included in .pdf form in the initial release of the “Migration Foundations and Methodologies” document)

Refresh Window, Bring to Front subscript added to “Go to Issues TOC” script when called from Main Menu – fixing a problem under some circumstances in which the Conversion Issues file wouldn’t end up in the front

Reformatted Output Layout in Resolutions file to use FileMaker standard fonts, and added a Title Header and running Footer

Cleaned up some font and formatting issues in the Conversion Reference records.

Miscellaneous cleanup. Removed some extraneous fields, layouts, and scripts.

Changed the message in the Conversion Reference file in the script called by the Print buttons, so that a more helpful message is shown explaining where to get the .pdf version of the database contents

Fixed a couple of problems in the saved Sort Order of the Issues database and of the Output Document script (also called by the Print buttons on several layouts), which were causing some records not to appear in the correct sequence.

New Issue # 10700 [Validations are triggered during or after a script when they weren’t previously] and associated Resolutions

New Issue # 11295 [Files cannot be closed individually] and associated Resolution

New Issue # 11302 [Files are closed automatically] and associated Resolution

Modified Issue # 10021 [After creating a new record, validations force the user to delete the record, or force-quit the application] (added “Duplicate Record” as another step which is affected similarly)

Modified Issue # 10623 [Set fields will now set values from different repetitions in other repeating fields, producing different results than previously] (added word: “inadvertently” to clarify the problem)

Modified Issue # 10672 [Clicking in the header or footer in List View causes the cursor to be inserted into a field] (added clarification that it is relevant to List View only)

Modified Resolution to Issue # 10483 [Relationships produce different related records] (provided a better suggestion as to how to resolve the problem)

Version 1.0.2 4/29/04

(included with MetadataMagic 2.0.1 and with the second revision of the “Migration Foundations and Methodologies” document)

Reduced the font size on the output layout, so that the appearance would be more consistent with the other sections of the “Migration Foundations and Methodologies” document. An artifact of this is that it prints out as fewer pages than previously.

New Issue # 11309 [Calculations which include “not” may change their result] and associated Resolution

New Issue # 11316 [Preview Mode snapshots no longer scale or print with high quality] and associated Resolution

Modified Issue # 10105 [Number fields containing words beginning with Y, N, T, or F create different results] (removed errant reference to “Section 4.3”)

Modified Issue # 10679 [Tab order is changed after conversion on Windows when the layout has many fields] (changed the word “lost” in title and body to “changed” and “altered”), and also changed the Reference record with which it is associated to “None”.

Modified Resolution to Issue # 10023 [Go to Related Record results in the wrong found set] (changed the first resolution to recommend using “IsEmpty” rather than “IsValid”)

Modified Resolution to Issue # 10049 [Previously good passwords are no longer accepted] (added information about tools which assist in resolving the issue)

Version 1.0.3 7/19/04

(not widely distributed, only to the participants in the FileMaker 7 Migration Training)

New Issue # 11932 [Functions using Status(CurrentGroups) fail - Groups are split into multiple Privilege Sets] and associated Resolutions

New Issue # 11939 [After a Set Field step, records are locked, preventing subsequent data entry or triggering validation failures] and associated Resolution

Modified Issue # 10434 [Script steps fail to edit records] (changed Issue title, clarified description, and added a Resolution)

Modified Issue # 10448 [Non-Roman language data (Russian, Czech, Slovak, etc.) does not convert correctly] (very significantly enhanced description, and added Resolutions)

Version 1.0.4 8/4/04

(included with MetadataMagic 2.0.2)

New Issue # 11946 [Related records are unexpectedly sorted after Go To Related Records] and associated Resolutions

New Issue # 11953 [A formula that depends on a number field containing text returns different results] and associated Resolution

Modified Issue # 10028 [After performing a script, the wrong file's window is in front (variation 1)] (clarified language by referring to "File C")

Modified Issue # 10392 [After performing a script, the wrong file's window is in front (variation 4)] (clarified language by referring to "File C")

Modified Issue # 10448 [Non-Roman language data (Russian, Czech, Slovak, etc.) does not convert correctly] (clarified description)

Version 1.0.5 12/17/04

(included with MetadataMagic 2.0.3)

New Issue # 11960 [Tests using Status(CurrentGroups) fail - a test for a valid Privilege Set fails] and associated Resolutions

New Issue # 11967 [Tests using Status(CurrentGroups) fail - Group names are concatenated in new Privilege Sets] and associated Resolution

Modified Issue # 10392 and added New Resolutions [After performing a script, the wrong file's window is in front (variation 4)] (clarified the association between this Issue and variation 1, and added relevant Resolutions) *(also see the "Changes in 7_0v3" document for additional information)*

New Resolution to Issue # 10035 [After performing a script, the wrong file's window is in front (variation 2)] (added a Resolution which can address the issue pre-conversion)

New Resolution to Issue # 10042 [After performing a script, the wrong file's window is in front (variation 3)] (added a Resolution which can address the issue pre-conversion)

New Resolution to Issue # 10049 [Previously good passwords are no longer accepted] (added a Resolution recommending the use of Password Administrator)

New Resolutions to Issue # 10420 [Calculations fail to remove text styles] (added two new Resolutions and corrected/enhanced the existing Resolution)

New Resolutions to Issue # 10637 [Calculated results change their values] (added new Resolutions and added suggestions to the existing Resolution)

Modified Resolution to Issue # 10028 [After performing a script, the wrong file's window is in front (variation 1)] (added suggestions to the second Resolution)

Modified Resolution to Issue # 10050 [Multiple-redundant File References are difficult to manage] (added detail to the second Resolution)

Modified Resolution to Issue # 10203 ["Set Next Serial Value" does not update the next serial value] (split the Resolution into two separate Resolutions)

Modified Resolution to Issue # 10273 [Tests using Status(CurrentGroups) fail - Groups are consolidated into fewer Privilege Sets] (added suggestions to the first Resolution)

Modified Resolution to Issue # 10280 [Tests using Status(CurrentGroups) fail - Master Access group is not recognized] (technical correction – added square brackets to “[Full Access]”)

Modified Resolution to Issue # 10658 [Portals “pop” when not intended (or don't pop when intended)] (added detail to clarify the Resolution)
